Biomedical Sciences Course Information Sheet for entry in 2024

Biomedical science focuses on how cells, organs and systems function in the human body; an exciting and dynamic area that is highly relevant to the understanding and treatment of human diseases.

Oxford is a highly respected and internationally recognised centre for biomedical research. Students on this course will benefit from tuition from leading experts working within a variety of nonclinical and clinical departments.

This course provides students with an intellectually stimulating education in modern molecular, cellular and systems biology and neuroscience. Please note this course does not provide medical training.

The Biomedical Sciences course at Oxford has been designed so that students initially acquire an integrated understanding of biomedical science that allows them to shape their subsequent studies towards the topics that interest them the most.

Practical laboratory work forms an integral part of this programme and you will be required to complete these practical elements to a satisfactory standard in order to progress through the course.

As the course progresses, increasing emphasis is placed on scientific research, as students obtain first-hand experience of laboratory research in the later stages. Students choose their own project and the possible areas for investigation within the University are wide ranging.

Students can elect to graduate after three years with a BA degree. On the basis of the specialisation initiated by the selection of second-year modules and confirmed by the choice of third-year options, students will be awarded a degree in either Neuroscience or Cell and Systems Biology.

The research-intensive fourth year leads to the award of a Master's degree. Students who complete the fourth year will graduate with a Master's degree.

A typical week

In your first year you would typically attend six to ten lectures, a Mathematics or Statistics class and a three-hour practical class each week.

In addition, you will prepare for and attend weekly tutorials during which you will discuss the significance and limitations of a given topic with your tutors, through consideration of experimental studies. Your remaining time will be available for independent study.

During the first two terms of the second year, your work is divided between around five lectures and one to two tutorials each week, in addition to practical classes. The final term concentrates on experimental research in a laboratory.

During the third year you will attend lectures, seminars and tutorials in your chosen specialist area.

During the fourth year, you will be working almost exclusively on your extended research project and attending original research seminars to bolster your understanding of experimental biomedical sciences.

Tutorials are usually 2-4 students and a tutor. Class sizes vary according to the type of class: workshops are typically 10 students, while practical classes are normally up to 40 students.

Most tutorials, classes, and lectures are delivered by members of academic staff or research staff. Many are world-leading experts with years of experience in teaching and research. Some tutorial and class teaching may also be delivered by postgraduate students who are usually studying at doctorate level.

To find out more about how our teaching year is structured, visit our [Academic Year](#) page and the [Biomedical Sciences website](#).

Course structure

TERMS 1-3 (YEAR 1)	
<p>COURSES</p> <ul style="list-style-type: none"> Numerical and scientific skills (Mathematics and Statistics, Chemistry and Physics) Body and cells Genes and molecules Brain and behaviour 	<p>ASSESSMENT</p> <p>In person examinations and other types of assessment at the end of year 1.</p> <p>A satisfactory practical record is required for progression to Year 2.</p>
TERMS 4-5 (PART A FINALS)	
<p>COURSES</p> <p>Students select courses totalling ten units from a wide range of subject areas, which currently include:</p> <ul style="list-style-type: none"> Psychological processes and disorders Neurophysiology Cellular and systems physiology Intra- and intercellular signalling Genetics and developmental biology Pharmacology Cellular pathology and immunology <p>The full list is available on the Biomedical Sciences website.</p>	<p>ASSESSMENT</p> <p>In person examinations at the start of the sixth term.</p> <p>An academic penalty will be applied for an unsatisfactory practical record.</p>

TERMS 6-9 (PART B FINALS)

COURSES

Terms 6-8

Students work on their short research project and specialist review.

Terms 6-9

Students select from a wide range of specialised options that cover:

- Cell and systems physiology and pharmacology
- Neuroscience
- Psychology
- Pathology and developmental biology

Students will choose whether they wish to graduate from the course with either a degree in Cell and Systems Biology or a degree in Neuroscience. The degree awarded will depend on the pattern of options chosen.

The full list is available on the [Biomedical Sciences website](#).

ASSESSMENT

In person examinations during the third term of the final year.

Students will also submit coursework and deliver a presentation on their research findings to the examiners.

Performance at 2:1 level in Years 2 and 3 is required for progression to Year 4.

TERMS 10-12 (PART C FINALS)

COURSES

Term 10

Students receive skills based teaching

Terms 10-12

Students work on their extended research project and a review article on state of the art research in a chosen field.

ASSESSMENT

Students will submit coursework and deliver a presentation on their research findings to the examiners.

The University will seek to deliver this course in accordance with the description set out above. However, there may be situations in which it is desirable or necessary for the University to make

UNDERGRADUATE ADMISSIONS AND OUTREACH

University Offices, Wellington Square, Oxford OX1 2JD

changes in course provision, either before or after registration. For further information, please see the University's [Terms and Conditions](#).

Fees

These annual fees are for full-time students who begin this undergraduate course here in 2024.

Information about how much fees and other costs may increase is set out in the University's Terms and Conditions.

Please note that while the University sets out its annual fees as a single figure, this is a combined figure for both your University and college fees. More information is provided in your [Terms and Conditions](#).

Fee status	Annual Course fees
Home (UK, Republic of Ireland, Channel Islands & Isle of Man)	£9,250
Overseas (including most EU students – see Note below)	£48,620

Note: Irish nationals living in the UK or Ireland, EU, other EEA, and Swiss nationals who have been granted settled or pre-settled status in the UK under the EU settlement scheme are eligible for 'Home fee' status and student loan support, subject to meeting residency requirements. We will contact you directly if we need further information from you to determine your fee status.

Please refer to the [Undergraduate fee status](#) pages for more information.

Living costs

Living costs for the academic year starting in 2024 are estimated to be between £1,345 and £1,955 for each month you are in Oxford. Our academic year is made up of three eight-week terms, so you would not usually need to be in Oxford for much more than six months of the year but may wish to budget over a nine-month period to ensure you also have sufficient funds during the holidays to meet essential costs. For further details please visit our [living costs webpage](#).

Living costs breakdown

	Per month		Total for 9 months	
	Lower range	Upper range	Lower range	Upper range
Food	£315	£495	£2,835	£4,455
Accommodation (including utilities)	£745	£925	£6,705	£8,325
Personal items	£190	£320	£1,710	£2,880
Social activities	£40	£95	£360	£855
Study costs	£35	£85	£315	£765
Other	£20	£35	£180	£315
Total	£1,345	£1,955	£12,105	£17,595

In order to provide these likely living costs (which are rounded to the nearest £5), the University and the Oxford SU conducted a living costs survey to complement existing student expenditure data

UNDERGRADUATE ADMISSIONS AND OUTREACH

University Offices, Wellington Square, Oxford OX1 2JD

from a variety of sources, including the UK government's Student Income and Expenditure Survey and the National Union of Students (NUS).

The current economic climate and high national rate of inflation make it very hard to estimate potential changes to the cost of living over the next few years. When planning your finances for any future years of study in Oxford beyond 2024-25, it is suggested that you allow for potential increases in living expenses of around 5% each year – although this rate may vary depending on the national economic situation. UK inflationary increases will be kept under review and the [living costs webpage](#) updated.

[Additional Fees and Charges Information for Biomedical Sciences](#)

In the third term of the second year, students who undertake a research project may wish to remain in Oxford after the end of full term to facilitate completion of their project.

However, this extended residence in Oxford is not a requirement and students should be aware that no financial support is available to help with any additional living costs during this time.

See above for the likely range of living costs for an additional month in Oxford.

In the (optional) fourth year of the Biomedical Sciences course, students will need to be in residence for an extended first term to begin their research project.

You will need to be in Oxford for 12 weeks in the first term. This extended term means that you will need to budget for slightly higher living costs in the final year, as you will be required to be in Oxford for longer than the standard term.

The additional work in the fourth year means that you will graduate with an MBiomedSci – a master's degree – as well as invaluable research experience that will be excellent preparation for further study or a range of careers.
