Course Information Sheet for entry in 2016-17

MSc in Water Science, Policy and Management

About the course

The MSc in Water Science, Policy and Management aims to equip the next generation of water professionals with the blend of skills necessary to make a significant contribution to sustainable water management pathways across competing priorities of water for ecosystems, food, energy, economic growth and human consumption.

The course comprises eight core modules within three thematic areas – water science, water and society, and water management. These modules are assessed by written examination. You also study two electives which are each assessed through a 4,000-word essay. You will also write an individual dissertation of 15,000 words.

The water science theme develops knowledge and understanding in physical, chemical, ecological and epidemiological aspects of water science in temperate, tropical and semi-arid zones. It provides a foundation in basic processes in each key subject area, as well as interactions throughout the hydrological cycle, and the role of society in altering the "natural" hydrological processes and function, and the impact this has on health.

The water and society theme explores how contested domains of power, interests and knowledge influence water decision-making, illustrated through institutional, socio-economic and policy analysis. This covers areas of water security and governance, law and regulation, trans-boundary water, water access, ownership and rights, water for development, and interactions between the state and civil society within dynamic and varied political, cultural, social and economic contexts.

The water management theme will help you to integrate the knowledge and understanding of water developed in the other thematic areas to better enable you to tackle the big water management challenges that we face. Geographic case studies are developed in the 'Basins Under Pressure' sessions to compare the trade-offs that occur between science and society in these contexts. Interactions with experts with different perspectives and expertise will help you to understand the challenges faced by water managers.

Teaching takes place through lectures, seminars and field visits, including a week long field trip to the Ebro Basin during the Easter vacation. The three themes will be integrated in the 'Water Policy, Politics and Law' module, through the 'Basins under Pressure' sessions which focus on geographic case studies.

Elective modules

These offer a tutorial-style teaching and discussion environment within smaller groups, based on a suite of contemporary research themes that reflect the specific interests of core faculty and visiting research associates. The teaching aim is to foster discussion and debate between academic staff and students to identify and explore theory, methods and practice in an academic space that encourages a critical dialogue.
Dissertation

An independent and original dissertation is an integral component of the course. In order to equip you with the necessary skills to undertake high quality research, a suite of training activities is offered to develop key transferable skills in order for you to be able to execute high quality independent and original research, and to expose you to applied research methods used widely in academic and professional research.

Research skills

Core faculty staff will lead a series of training sessions that will build core transferable skills in the natural and social sciences.

Components include:

- research ethics
- academic writing
- research design
- hydrological modelling
- GIS
- water quality evaluation
- qualitative and quantitative research methods.

The skills training will focus on both strengthening capabilities to conduct high quality research for your dissertation and on future professional development.

Changes to courses

The University will seek to deliver each course in accordance with the descriptions set out above. However, there may be situations in which it is desirable or necessary for the University to make changes in course provision, either before or after registration. For further information, please see the University’s Terms and Conditions.

Expected length of course

12 months

Annual fees for entry in 2016-2017

<table>

The fees shown above are the annual tuition and college fees for this course for entry in the 2016-17 academic year; for courses lasting longer than one year, please be aware that fees will usually increase annually. For details, please see our guidance on likely increases to fees and charges.

Tuition and college fees are payable each year for the duration of your fee liability (your fee liability is the length of time for which you are required to pay tuition and college fees).

**Additional cost information**

All costs associated with compulsory fieldwork are paid for by the department.
Living costs

In addition to your fees, you will need to ensure that you have adequate funds to support your living costs for the duration of your course.

The likely living costs for 2016-17 are published below. These costs are based on a single, full-time graduate student, with no dependants, living in Oxford. We provide the cost per month so you can multiply up by the number of months you expect to live in Oxford.
