

Course Information Sheet for entry in 2019-20

DPhil in Biomedical and Clinical Sciences

About the course

This three-year programme is tailored specifically to the needs of talented clinicians who aspire to a career in academic medicine or clinical psychology. The course is also known as the Doctoral Training Fellowship Scheme for Clinicians.

Successful applicants will work towards a DPhil within one of three streams which are in basic sciences, mental and cognitive health, and translational/experimental medicine.

Applicants are strongly advised to visit the Medical Sciences Graduate School website to help them identify the most suitable course and supervisors.

You will be offered generic research training and required to meet standard University milestones for progress. All students are formally monitored via supervisor feedback forms submitted three times per year.

1. Basic sciences

This stream aims to provide high-quality research training in basic and applied molecular science for clinical academics who aspire to a career in academic medicine. It is expected that you will carry out DPhil projects in one of the following broad areas:

- metabolism
- genomics
- haematology
- infection/immunity/inflammation
- neurobiology
- cardiovascular
- rheumatology related disease, including the process of inflammation, damage and repair.

Training provision is tailored to your needs, in relation to your research project and determined in consultation with supervisors, mentor and programme directors.

It is expected that you will have both basic-scientist and clinician-scientist supervisors, to bridge the gap between basic and applied research.

2. Mental and cognitive health

This stream aims to recruit clinical psychologists, psychiatrists and neurologists to the DPhil programme and place them into internationally-recognised research groups that have successfully developed new treatments, clinical assessments and rehabilitation procedures and/or novel experimental medicine approaches to psychopharmacology.

You should expect to receive core teaching in a range of skills important for clinical research in mental and cognitive health. These may include: experimental design, structured clinical interviews, cognitive testing, programming experiments MATLAB/using E-Prime/SuperLab etc, design and analysis of clinical trials, acquisition and analysis of fMRI and other imaging data.

In addition, Oxford has exceptional multimodal imaging facilities to which you should have access. If appropriate for your research, you will normally be able to join the FMRI graduate training programme.

Throughout the DPhil course, students on this stream will have a weekly day-long placement in a unit that conducts clinical work closely related to your research programme, in order to:

- observe how research and clinical implementation can work together
- continue to develop your clinical skills

Each placement normally lasts for twelve months, during which you should have the opportunity to work in units that aim to help you observe translational work in a complementary area to your research. In this way, the programme aims to equip you with the skills you need to ensure that, when relevant, you can rapidly translate your future research findings into patient benefit.

You will be required to meet standard University milestones for progress and will be monitored formally via supervisor feedback forms submitted three times per year.

3. Translational/experimental medicine

This is a new theme, introduced to take advantage of other strengths in biomedical science. These include projects in:

- the Institute of Biomedical Engineering, which provides a unique environment where engineers and clinicians work together, focusing on novel technological approaches to healthcare problems;
- vaccinology through the Jenner Institute and the Oxford Vaccine Group, where novel vaccine approaches for infection and also non-infectious targets such as cancer are developed and tested through clinical trials;
- veterinary science in collaboration with the Pirbright Institute (formerly the Institute of Animal Health) and the Royal Veterinary College in conjunction with the Jenner Institute and Wellcome-funded projects (eg in orthopaedics and in neuromuscular disease) and an interdisciplinary training initiative on Innovative Food Systems Teaching and Learning;
- translational and applied neurosciences including advanced neuro-imaging available through the Functional Magnetic Resonance Imaging Building (fMRIB) and novel PET approaches with Imanova, interfacing with scientists with skills in physics and big data;
- major non-communicable diseases through the Nuffield Department of Population Health, Clinical Trials Service Unit, and Epidemiologic Studies Unit, and the new Big Data Institute (BDI), focusing on the analysis of large, complex, heterogeneous data sets for research into the causes and consequences, prevention and treatment of disease. Ethox, also based in the Nuffield Department of Population Health, provides an environment where empirical research and ethical analyses can be combined around clinical ethics, research ethics, and global/population health ethics; and
- international health and tropical medicine, building on collaborations between Oxford investigators and its major overseas programmes with bases in Kenya, Thailand, and Vietnam.

The Kennedy Institute of Rheumatology has more than 25 research groups working in the areas of immunity and microbiome, inflammation biology and tissue remodelling and regeneration. The Institute has close ties with nearby clinical centres in Oxford and beyond, which provide a gateway to patient cohorts in inflammatory arthritis, osteoarthritis, cancer and inflammatory bowel disease that enable translation from bench to bedside. Examples of translational initiatives include The Arthritis Therapy Acceleration Programme (A-TAP), which was launched to speed up the delivery of better treatments for Immune Mediated inflammatory Diseases (IMIDs). This programme targets the underlying causes of disease by applying innovative trial design allowing repurposed or new drugs to be tried out across a range of IMIDs, with success determined through tissue biomarkers rather than clinical outcomes. The programme is initially focusing on rheumatoid arthritis, inflammatory bowel disease, Sjogren's syndrome and seronegative spondyloarthropathies. The Institute also houses the Arthritis Research UK Centre for Osteoarthritis (OA) Pathogenesis, which seeks to create a seamless transition from molecular discovery through pre-clinical modelling to experimental medicine in OA. Additional translational programmes include those in Dupuytren's disease, fibrosis, and fracture repair..

Changes to courses

The University will seek to deliver this course in accordance with the description set out above. However, there may be situations in which it is desirable or necessary for the University to make changes in course provision, either before or after registration. For further information, please see the University's Terms and Conditions.

Expected length of course

3 years

Costs

Annual fees for entry in 2019-20

Fee status	Annual Course fees
Home/EU (including Islands)	£7,665
Overseas	£23,950

The fees shown above are the annual course fees for this course, for entry in the stated academic year.

Course fees cover your teaching as well as other academic services and facilities provided to support your studies. Unless specified in the additional information section below, course fees do not cover your accommodation, residential costs or other living costs. They also don't cover any additional costs and charges that are outlined in the additional cost information below.

Course fees are payable each year, for the duration of your fee liability (your fee liability is the length of time for which you are required to pay course fees). For courses lasting longer than one year, please be aware that fees will usually increase annually. For details, please see our guidance on likely increases to fees and charges.

Graduate students who have reached the end of their standard period of fee liability may be required to pay a termly University and/or a college continuation charge.

The University continuation charge, per term for entry in 2019-20 is £488, please be aware that this will increase annually. For part-time students, the termly charge will be half of the termly rate payable by full-time students.

If a college continuation charge applies (not applicable for non-matriculated courses) it is likely to be in the region of £100 to £400 per term. Please contact your college for more details.

Additional cost information

There are no compulsory elements of this course that entail additional costs beyond fees (or, after fee liability ends, continuation charges) and living costs. However, please note that, depending on your choice of research topic and the research required to complete it, you may incur additional expenses, such as travel expenses, research expenses, and field trips. You will need to meet these additional costs, although you may be able to apply for small grants from your department and/or college to help you cover some of these expenses.

Living costs

In addition to your course fees, you will need to ensure that you have adequate funds to support your living costs for the duration of your course.

The likely living costs for 2019-20 are published below. These costs are based on a single, full-time graduate student, with no dependants, living in Oxford. We provide the cost per month so you can multiply up by the number of months you expect to live in Oxford.

	Likely living costs for 1 month		Likely living costs for 9 months		Likely living costs for 12 months	
	Lower range	Upper range	Lower range	Upper range	Lower range	Upper range
Food	£265	£371	£2,387	£3,342	£3,183	£4,456
Accommodation	£566	£739	£5,093	£6,655	£6,790	£8,874
Personal items	£122	£271	£1,098	£2,435	£1,464	£3,246
Social activities	£42	£126	£380	£1,138	£506	£1,518
Study costs	£40	£88	£359	£788	£478	£1,051
Other	£23	£48	£208	£432	£277	£576
Total	£1,058	£1,643	£9,525	£14,790	£12,698	£19,721

When planning your finances for any future years of study at Oxford beyond 2019-20, you should allow for an estimated increase in living expenses of 3% each year.

More information about how these figures have been calculated is available at www.graduate.ox.ac.uk/livingcosts.
