

## Course Information Sheet for entry in 2020-21

### MSc in Precision Cancer Medicine

#### About the course

The MSc in Precision Cancer Medicine is a two year, part-time, online course that will provide you with the multidisciplinary skillset and knowledge required to design, conduct and lead precision medicine research.

The course will appeal to health professionals from a variety of backgrounds including clinical academics, diagnosticians, scientists and clinicians from academia and industry; bio-informaticians, statisticians and scientists and clinicians working in all stages of target discovery and drug development.

Precision medicine is an emerging approach which takes into account variability in the biology, environment, and lifestyle for each individual person to help guide disease diagnosis and treatment. In particular, genetic and genomic data allow us to go beyond conventional histopathological assessment, and classify cancer into distinct sub-entities, leading to novel molecularly-directed treatment approaches.

To realise the potential for precision medicine, the clinical development of diagnostics and therapeutics need to go hand in hand. Future leaders – whether in research or in the clinic – will need a broad understanding of the field and the ability to work with a range of stakeholders.

This course aims to deliver a broad overview of the scientific and clinical disciplines involved in precision medicine. You will cover the scientific basis for precision medicine, current technologies, drug discovery and development, and the global regulatory, payer and ethical challenges.

The course consists of eight modules:

1. Introduction to Human Genetics and Genomics
2. Omics Techniques and their Application to Genomic Medicine
3. Clinical Interpretation of Precision Diagnostics and Response Monitoring
4. Treatment, Pharmacogenomics, Clinical Trials and Experimental Cancer Therapeutics
5. Clinical Bio-informatics and Statistics
6. Ethics and Health Economics
7. Global Perspective on Molecular Pathology, Imaging and Early Detection
8. Onco-immunology and Genomics

The course will be taught using state-of-the art technology via the University's virtual learning environment (VLE) platform. Core and guest lectures are pre-recorded, and will be available for you to watch in your own time, alongside recommended reading and other coursework activities. You will attend regular online discussion groups, with a small group of fellow students, which will be moderated by members of faculty. For these sessions you will be expected to prepare short essays and presentations for discussion. Each module also has a moderated Q&A session and online tests for you to check your understanding.

The taught modules conclude in March of year two with a compulsory week-long residential school in Oxford, to consolidate your learning. For the final six months you will work on a dissertation. The aim of the dissertation is to enable you to explore an area relevant to Precision Cancer Medicine in depth and to develop a carefully considered and critical piece of written work related to this chosen area of study.

To complete the MSc you need to submit and pass two pieces of written work, an examination and the dissertation.

Schedule of summative assessments that contribute to your final degree:

#### Year One

- June: Extended essay
- July: Practical assessment - written work

#### Year Two

- March: Examination
- August: Dissertation

Further details of the curriculum, schedule and assessments can be found on the course webpage on the department's website (see *Further information and enquires* for details).

### Supervision

You will be assigned a personal advisor from the course team, who will help you review your progress, and discuss any concerns you have; your course advisor and the course administration team will usually be your first port of call for any queries about your studies. You will also have an advisor at your Oxford college, whose support you can seek for issues you choose not to discuss with the course team. During the research project you will be allocated a project supervisor who will be responsible for your supervision and training.

The allocation of graduate supervision is the responsibility of the Department of Oncology and it is not always possible to accommodate the preferences of incoming graduate students to work with a particular member of staff. A supervisor may be found outside the Department of Oncology.

### Changes to courses

The University will seek to deliver this course in accordance with the description set out above. However, there may be situations in which it is desirable or necessary for the University to make changes in course provision, either before or after registration. For further information, please see the University's Terms and Conditions.

### Expected length of course

<b>Mode of study</b>	Part Time Only
<b>Expected length</b>	2 years

## Costs

### Annual fees for entry in 2020-21

Fee status	Annual Course fees
Home/EU (including Islands)	£6,540
Overseas	£14,020

Course fees are payable each year, for the duration of your fee liability (your fee liability is the length of time for which you are required to pay course fees). For courses lasting longer than one year, please be aware that fees will usually increase annually. Information about how much fees and other costs may increase is set out in the University's Terms and Conditions.

Course fees cover your teaching as well as other academic services and facilities provided to support your studies. Unless specified in the additional cost information (below), course fees do not cover your accommodation, residential costs or other living costs. They also don't cover any additional costs and charges that are outlined in the additional cost information.

Graduate students who have reached the end of their standard period of fee liability may be required to pay a termly University and/or a college continuation charge.

The University continuation charge, per term for entry in 2020-21 is £508, please be aware that this will increase annually. For part-time students, the termly charge will be half of the termly rate payable by full-time students.

If a college continuation charge applies (not applicable for non-matriculated courses) it is likely to be in the region of £100 to £400 per term. Please contact your college for more details.

### Additional cost information

Students will need a computer (Windows or iOS), webcam and microphone. Students will also need to ensure appropriate internet connection. The recommended bandwidth for the software used is 1Mbps. Estimated cost to purchase and set up from scratch would typically be around £1000 in the UK. Students may be able to apply for small grants from their department or college.

It is necessary that students attend a one week residential school at the University of Oxford. Accommodation and some food costs whilst attending the residential school are included in the course fees. You will need to pay for your travel to Oxford and additional food costs, but you will be able to claim back travel expenses up to £200 for Home/EU students and up to £1000 for Overseas students. You may be able to apply for small grants from your department and/or college to help you cover any additional expenses associated with attending the residential school.

## Living costs

In addition to your course fees, you will need to ensure that you have adequate funds to support your living costs for the duration of your course.

If you are studying part-time your living costs may vary depending on your personal circumstances but you must still ensure that you will have sufficient funding to meet these costs for the duration of your course.

The likely living costs for 2020-21 are published below. These costs are based on a single, full-time graduate student, with no dependants, living in Oxford. We provide the cost per month so you can multiply up by the number of months you expect to live in Oxford.

	Likely living costs for 1 month		Likely living costs for 9 months		Likely living costs for 12 months	
	Lower range	Upper range	Lower range	Upper range	Lower range	Upper range
<b>Food</b>	£270	£385	£2,430	£3,465	£3,240	£4,620
<b>Accommodation</b>	£630	£760	£5,670	£6,840	£7,560	£9,120
<b>Personal items</b>	£130	£245	£1,170	£2,205	£1,560	£2,940
<b>Social activities</b>	£45	£110	£405	£990	£540	£1,320
<b>Study costs</b>	£40	£95	£360	£855	£480	£1,140
<b>Other</b>	£20	£55	£180	£495	£240	£660
<b>Total</b>	£1,135	£1,650	£10,215	£14,850	£13,620	£19,800

When planning your finances for any future years of study at Oxford beyond 2020-21, you should allow for an estimated increase in living expenses of 3% each year.

More information about how these figures have been calculated is available at [www.graduate.ox.ac.uk/livingcosts](http://www.graduate.ox.ac.uk/livingcosts).
