OXFORD ARTIFICIAL INTELLIGENCE SOCIETY
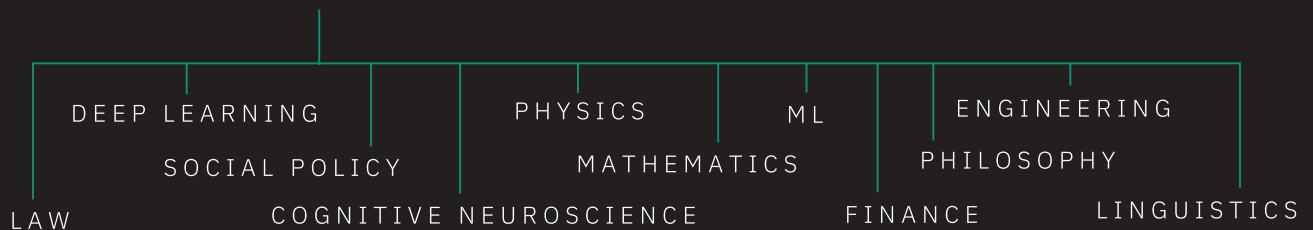

Embedded in the University of Oxford, the society provides a platform to educate, build, connect, and employ an Artificial Intelligence community that constantly drives innovation for the University and the world.

WHO WE ARE

Our society is driven by both diversity and a common passion about AI, with our outstanding leadership team.

- 24 members
- 30+ publications
- 18 countries
- 15+ areas of study

WHAT WE DO

The society endeavors to shape the future through building a community among the people driving development and creativity in AI. This consists of four pillars:

Education

We organise talks, workshops, and study groups in order to educate our members about artificial intelligence. We focus on communicating a proper understanding of AI and describing specific applications in academic and real world areas. Recently we organized workshops about statistical learning and AI ethics.

Labs

Our diverse and experienced team offers a great platform to develop and experiment with AI. Recently we completed our Virtual Reality Beatsaber project, which generates templates for any song in the VR rhythm game. Our next project is already in the works.

Community

We are passionate about building a community that fosters interdisciplinary communications, regardless of their experience with AI. Our social gatherings such as study groups and film nights connect AI researchers and enthusiasts at the University of Oxford. We also hold parties and events for other like-minded Oxford societies to gather, share our knowledge, and have fun.

Careers

We help our members to find AI-related jobs and internships through our careers newsletter and community slack channel, as well as talks by our sponsors. We also prepare our members to excel in AI recruiting processes by equipping them with the technical skills to work in the industry.
